

# Visual Studio Code Resource Guide

## *Downloading Visual Studio Code*

1. Visit the Visual Studio Code website: Go to the official Visual Studio Code website at <https://code.visualstudio.com/>
2. Download Visual Studio: Click on the "Download Visual Studio" button. This will start the download process for the Visual Studio installer.

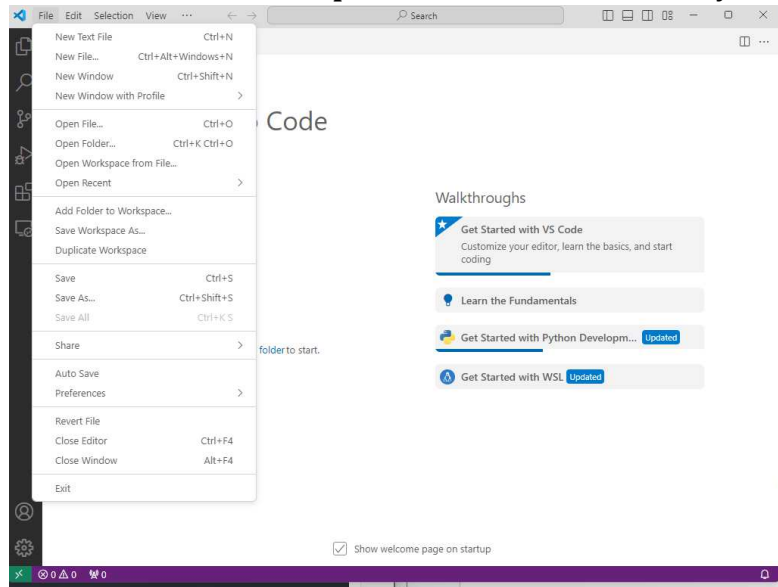

3. Run the installer: Once the installer is downloaded, run it to start the installation process.
4. Select workloads: During the installation process, you'll be prompted to select the workloads you want to install. For Python development, make sure to select the "Python development" workload.
  - a. If it does not ask you to do this wait until Visual Studio Code is downloaded and open it.
  - b. Then click the extension tab (shown to the right) and type in Python to download it and press Install.

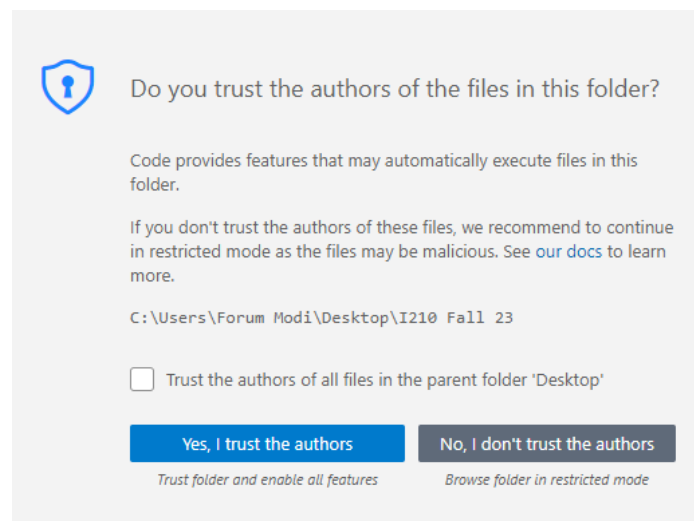

5. Finish installation: Once you've selected the workloads and components, continue with the installation process. Visual Studio will download and install the necessary files.

## Set up I210 Folder for Visual Studio

1. Create an I210 folder that is NOT in your IU OneDrive (creating it in your IU OneDrive will cause errors)  
Open VS Code and select **File -> Open Folder**, and then select your I210 Folder

2. It may ask that you to “Trust the Folder”, select “Yes, I trust the authors”

3. Now, you can create new files for I210 within this folder!

This will make it much easier to run programs when they rely on several files (we will get to this much later in the semester)

## *Opening Files in Visual Studio Code*

Once we have gotten to lesson 18, you will need to be able to access files in your program.

1. *Check Folder with Files:* Make sure that your python file and the file you are opening are in the same folder.

Use your file explorer (windows) or finder (mac) to find the python file and file to read, make sure you can see them in the same folder

**DO NOT USE YOUR IU ONE DRIVE**, this causes errors due to the way the university stores files on one drive.

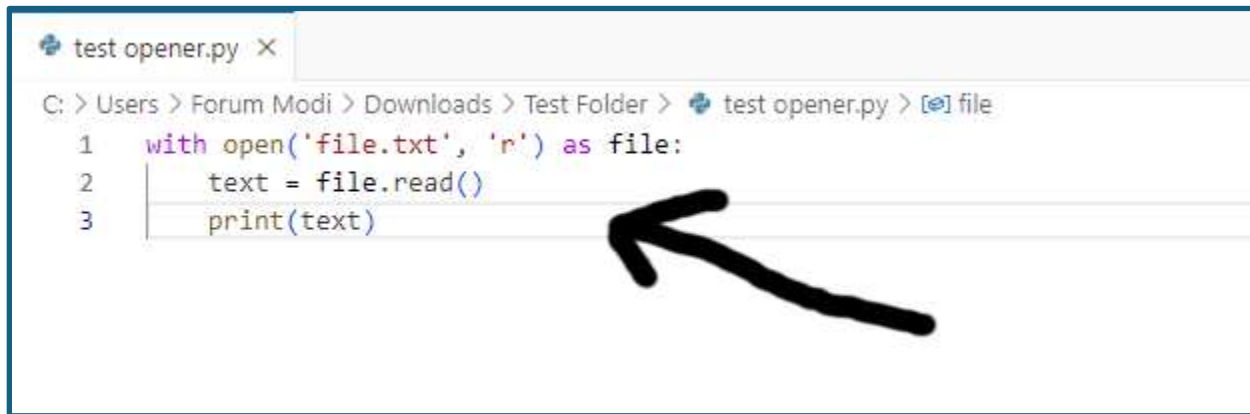

2. Open Visual Studio using the folder where the python file and the file you are opening are in (recommended to use a specific I210 folder).
  - a. **Select File -> Open Folder** and then select the folder
3. *Run Your Python Code:* You can now run your Python code by clicking on the "Run" button in the top right corner of the editor.

If you still get a file error, try:

- Double checking you spelled the file name right in your code.
- Kill the terminal by pressing the trashcan on the right side of the terminal, and try again.
- Check steps 1 & 2 again, make sure you open the Folder with both files in it for step 2

## Getting To Know Visual Studio Code

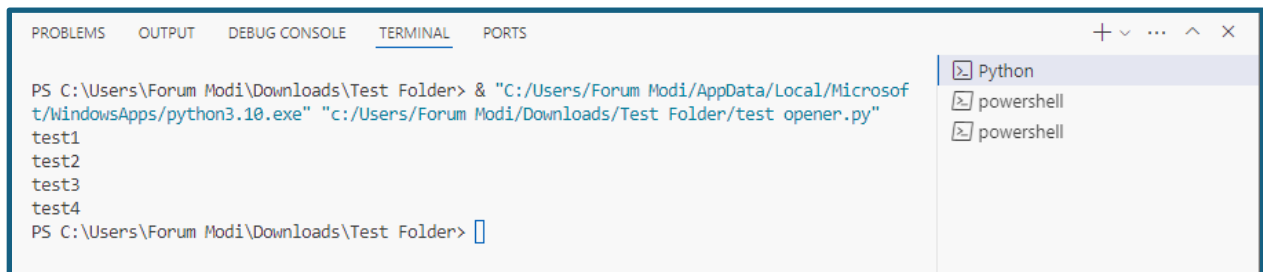

**Editor Area:** Where you write your code, the main part of the program

**Running Code:** You can run code using the triangle shape icon on the right of the file name.

**Terminal:** Bottom on VS code where the output of code you run will be shown. You can also type in terminal commands here. If you do not see it, run code and it will appear.

**Search Bar:** This at the top of the VS code screen, you can use this to search for files to open

**Side Bar:** Located on the left side, it provides quick access to different views like Explorer, Search, Source Control, and Extensions.

## Helpful VS Code Settings

### Turn Autosave On

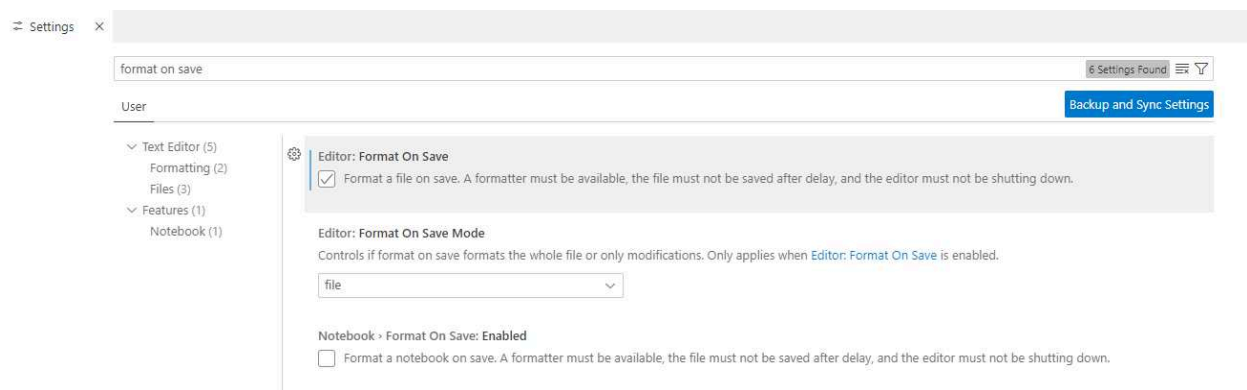

Select File -> Click Auto Save.

Now when you select File, you should see a small checkmark next to Auto Save

### Turn Format on Save on

Select File->Preferences->Settings, then search for “format on save”.

Tick the box that says “Editor:Format on Save”

## VS Code Shortcuts

Here are some shortcuts for VS Code that will be helpful!

**Mac Users:** *Cntrl* can be replaced by the *Command* key

### Non-VS Code Specific

- *Copy*: Ctrl + C
- *Paste*: Ctrl + V
- *Cut*: Ctrl + X
